

Electrostatics-Charge

1. The diagram below represents two electrically charged identical-sized metal spheres, A and B.

If the spheres are brought into contact, which sphere will have a net gain of electrons?

1. A, only
 2. B, only
 3. both A and B
 4. neither A nor B
2. Metal sphere A has a charge of -2 units and an identical metal sphere, B, has a charge of -4 units. If the spheres are brought into contact with each other and then separated, the charge on sphere B will be
1. 0 units
 2. -2 units
 3. -3 units
 4. +4 units
3. If an object has a net negative charge of 4.0 coulombs, the object possesses
1. 6.3×10^{18} more electrons than protons
 2. 2.5×10^{19} more electrons than protons
 3. 6.3×10^{18} more protons than electrons
 4. 2.5×10^{19} more protons than electrons

Base your answers to questions 4 and 5 on the information below

A lightweight sphere hangs by an insulating thread. A student wishes to determine if the sphere is neutral or electrostatically charged. She has a negatively charged hard rubber rod and a positively charged glass rod. She does not touch the sphere with the rods, but runs tests by bringing them near the sphere one at a time.

4. Describe the test result that would prove that the sphere is neutral
5. Describe the test result that would prove that the sphere is positively charged.

6. Oil droplets may gain electrical charges as they are projected through a nozzle. Which quantity of charge is *not* possible on an oil droplet?

1. $8.0 \times 10^{-19} \text{ C}$
2. $4.8 \times 10^{-19} \text{ C}$
3. $3.2 \times 10^{-19} \text{ C}$
4. $2.6 \times 10^{-19} \text{ C}$

7. A positive test charge is placed between an electron, e , and a proton, p , as shown in the diagram below.

When the test charge is released, it will move toward

1. A
 2. B
 3. C
 4. D
8. A metal sphere has a net negative charge of 1.1×10^{-6} coulomb. Approximately how many more electrons than protons are on the sphere?
1. 1.8×10^{12}
 2. 5.7×10^{12}
 3. 6.9×10^{12}
 4. 9.9×10^{12}
9. A positively charged glass rod attracts object X. The net charge of object X
1. may be zero or negative
 2. may be zero or positive
 3. must be negative
 4. must be positive
10. The charge-to-mass ratio of an electron is
1. $5.69 \times 10^{-12} \text{ C/kg}$
 2. $1.76 \times 10^{-11} \text{ C/kg}$
 3. $1.76 \times 10^{11} \text{ C/kg}$
 4. $5.69 \times 10^{12} \text{ C/kg}$
11. What is the magnitude of the charge, in coulombs, of a lithium nucleus containing three protons and four neutrons?

Electrostatics-Charge

12. The diagram below shows three neutral metal spheres, x, y, and z, in contact and on insulating stands.

Which diagram best represents the charge distribution on the spheres when a positively charged rod is brought near sphere x, but does not touch it.
