Good afternoon CSH

You can find out if passwords in your Google Account may have been exposed, are weak, or are used in multiple accounts. Then, you can change any unsafe passwords to keep your accounts more secure.

You can start Password Checkup or:

1. Go to passwords.google.com.
2. Select **Go to Password Checkup** › **Check passwords**. You might need to sign in.

Tip: To automatically update the passwords in your Google Account, you can either:

- Turn on sync in Chrome.
- Sign into Chrome and allow Chrome to use passwords from your Google Account when asked.

Secure your passwords

After your passwords have been checked for security issues, you'll see 3 types of results.

1. Compromised passwords
2. Reused passwords
3. Accounts using a weak password

Follow the instructions for each type

Be well and be safe.   Share this tool with family and friends.

Run the tool on all of your Google accounts
