

# What's New with Chromebook? September 12, 2023

Chromebooks update automatically to provide you with the latest features and keep the software fresh and speedy. Here are some highlights from recent updates.

Here is how you see the new features (on your chromebook select the three dots at the top right >> Help >> About Google Chrome >> Get Help with Google Chrome >> What's New)

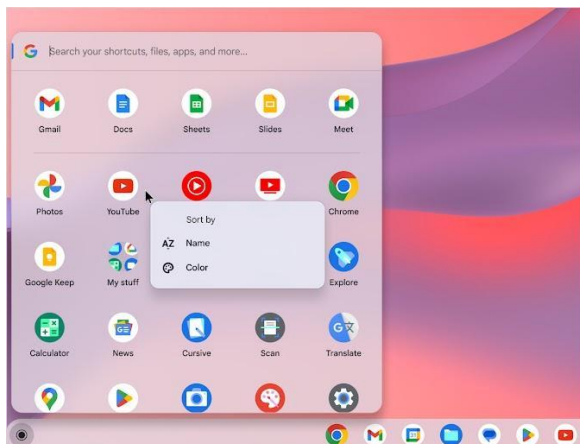

## Make movies and edit videos in Google Photos

Bring your creativity to life with Google Photos' new movie editor and video editing features. Start from scratch or select a theme and the people you'd like to feature, and Google Photos will make a movie with both video clips and photos. Then you can perfect it by applying filters to the video clips, adding music, and more. To get started, open the Google Photos app from your Launcher or download it from the Google Play Store.

## Organize your apps in the Launcher

Did you know there are several ways you can customize the way apps show up in the Launcher? Tap the Everything Button or `key` on your keyboard to pull up the Launcher, then right click to re-sort your apps into alphabetical order or by color. Or if you want your favorites grouped together, drag one app on top of another to make a custom folder.

## More options for handwritten notes

Bring your notes to life with new options to change the color and thickness of your pen strokes. Make your headings bold so it's easier to skim a note, or make all your most important to-dos bright red so you can't miss them. If you have a stylus-enabled Chromebook, just open the Cursive app, select your writing or drawing, and find new options in the toolbar.
